

Object Test Case of OTP:

1. Check if when a client requests the OTP then make sure OTP is generated.
2. Check if the OTP is sent to an authentic platform.
3. Check the duration of the OTP time is limited.
4. Check when to use the OTP to make sure that it is an authentic user.
5. Check that an OTP has been used only once.
6. Check if someone repeatedly requests the OTP, make sure the previous OTP is not executed.
7. Check if someone repeatedly requests the OTP, make sure the OTP is generated repeatedly.
8. Check that OTP response time is not delayed.
9. Check that the OTP delivery process is secure.
10. Check that the OTPs are not predictable or guessable.
